

## FOLDING ACCESS SYSTEMS FOR VEHICLES

**This picture features dated, unsafe and inefficient access technology.**

### Safety Access Systems for all Large Mobile Equipment.

All access systems supplied by Power Step are designed and manufactured in Australia.

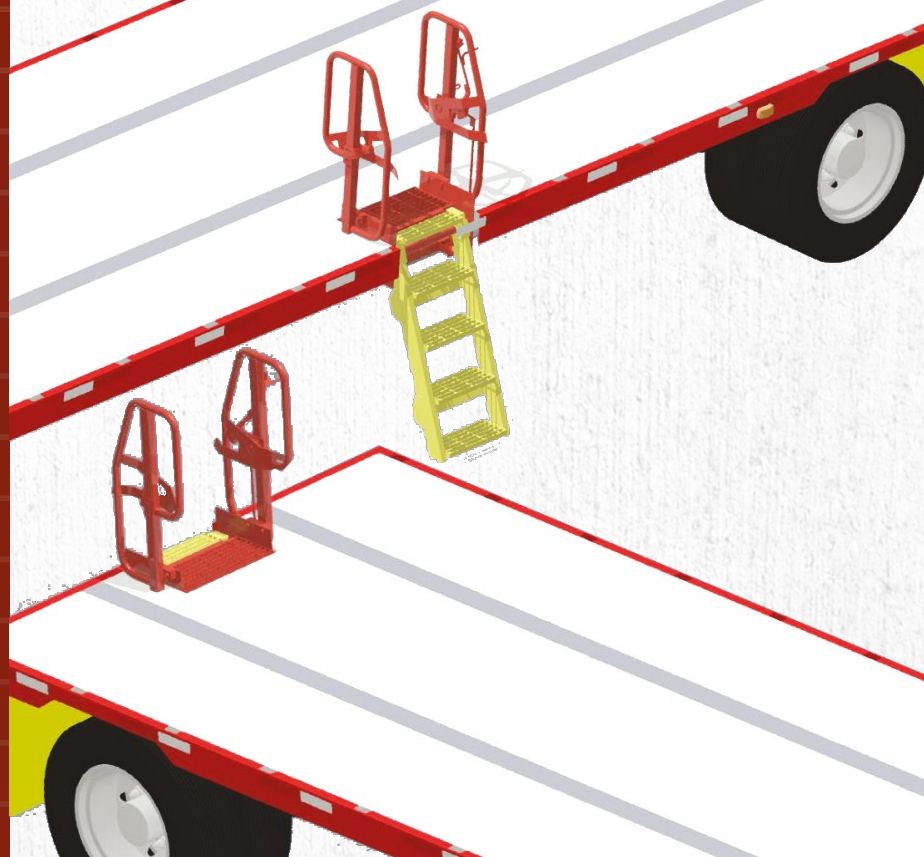

Power Step exports its products to Indonesia, Papua New Guinea, New Zealand, New Caledonia, Canada, and beyond. Since its inception, Power Step has manufactured and sold over 800 access systems. Power Step has designed access systems for all major OEMs.

All access systems designed by Power Step comply with the relevant Australian Standards.  
(AS1657:1992/AS3868:1991/SAE J185)

- **Folding Retractable Stairways**
- **Boom/Parallel Arm Elevating Platforms**
- **Fire Emergency Egress Systems**
- **Emergency Egress Stainless Steel Rope Ladders**
- **Sun Blinds customised to suit major mobile mining and construction equipment**
- **EVA-A-LIGHTS LED lights: A direct replacement for brake, indicator and tail lights**

**We've developed something better.**

## Featured Product: Extendable, Folding Stair

At Power Step we have successfully created a lighter stair with reduced operating weight, without sacrificing it's hard-duty nature.

- The stair operates independently through a power pack that activates the hydraulic cylinders to ascend and descend the stair.
- The design allows a stair-type access with a 45-degree angle of deployment and handrails, providing the operator with the necessary three-point contact. The handrails fold into the stair and do not obstruct the walkway when the stair is in the stowed position.
- Fully compliant with AS1657-2013
- All grating used is self-cleaning and provides non-slip walking surfaces

## Why Power Step?

**POWER STEP PRODUCTS** allow for safe access, and provide greater working areas for staff on vehicles.

The innovation behind Power Step access platforms, stairs and ladders though is that they fold away to take up less space on the vehicle when not in use. The are also built with easily maintained, non slip materials, and backed by an international warranty.

A regular access ladder may be the minimum requirement for access, but it requires 3-point contact at all times by the operator. A Power Step folding stair system allows the operator to access a vehicle while also carrying other equipment.

**REASON:**  
There is no **Power Step<sup>®</sup>**  
Safety Access System installed.

The Leading Supplier of  
Safety Access Systems for  
all large mobile equipment.
